

Ram Jack® Exclusive Foundation System Technologies

Ram Jack® is an internationally recognized structural repair company with the latest foundation repair technology and a tradition for the highest standards in customer care. Our patented ICC-ES approved helical anchor and driven pier systems have been proven on countless homes and in a wide variety of commercial applications.

Extreme Corrosion Protection

Ram Jack® is pleased to lead the way into the future of underground corrosion protection for foundation systems. Our specially formulated powder coating is designed for maximum mechanical performance, impact resistance, and superior adhesion. In addition to improving the already long life of the Ram Jack® products, the powder coating is friendly to the environment and meets US Environmental Protection Agency standards.

Patented Screw-Together Technology

The patented Ram Jack® Screw Together Technology for Helical Piers has made Ram Jack® the system of choice for engineers and homeowners alike. Available in both residential and commercial applications, the Ram Jack® Screw-Together Technology offers the following benefits over traditional helical systems:

- Shaft forms a rigid connection during installation which creates an immediate reaction
- Fully internal connection completely eliminates annular spacing along shaft (less drag)
- Superior lateral strength and increased speed of installation
- Integrity of pier column is not compromised by shaft twist
